

KBS Queries

Sociocultural DataBase – Instantiation and Evaluation Experiment (2025-2026)

LoS/MSA Domestic Trafficking Ads

The Knowledge-Base Sufficiency (KBS) queries establish the evaluation baseline by independently extracting the structural and contextual information against which generated sociocultural data biographies are compared.

Relevant field markers for primary corpus:

KBS 1 — Representational Content: [FULL TEXT](#), [Skills Specified](#), [Age Specified](#), [Gender Specified](#), [Notes](#)

KBS 2 — Spatial/Temporal Markers: [Ad Date](#), [Press Date](#), [County](#), [Sale Location County](#), [Sale Location State](#), [Subscriber Locale](#), [Subscriber State](#)

KBS 3 — Entity Resolution Baseline: [First Name](#), [Last Name](#), [Subscriber Lastname](#), [Notes](#), [FULL TEXT](#)

KBS 4 — Structural Silences: [First Name](#), [Last Name](#), [Age Specified](#), [Gender Specified](#), [Sale Date](#), [Sale Disposition](#), [Notes](#), [FULL TEXT](#)

Notebook 1: Primary Corpus Data Audit (.csv Evidence) These four queries are executed with only the primary database file active to prove the system can extract structural baseline realities.

- **Query 1 Representational Content** ([FULL TEXT](#), [Skills Specified](#), [Age Specified](#), [Gender Specified](#), [Notes](#)): What specific textual conventions, physical

LoS/MSA Domestic Trafficking Ads

markers, terms of labor, or age classifications are explicitly recorded in the text strings of these advertisements?

- **Query 2 Spatial/Temporal Markers** (Ad Date, Press Date, County, Sale Location County, Sale Location State, Subscriber Locale, Subscriber State): What is the exact chronological distribution and geographic spread of the advertisements across Maryland counties within this dataset?
- **Query 3 Entity Resolution Baseline** (First Name, Last Name, Subscriber Lastname, Notes, FULL TEXT): What unique names, owner identities, or frequencies of unnamed individuals are natively captured within the actor fields of this database?
- **Query 4 Structural Silences** (First Name, Last Name, Age Specified, Gender Specified, Sale Date, Sale Disposition, Notes, FULL TEXT): Which specific fields across the dataset contain systemic null values, empty strings, or unrecorded information?

Notebook 2: Interpretive Context Audit (Curated Reference Notes) These six queries are executed with only the scholarly notes active to verify that Notebook 2 contains the explicit evidentiary depth required to explain the core components.

- **Query 5 (Record-Generating Purpose & Legal Structures):** What specific commercial motivations, legal mandates, or Maryland statutes governed the public auctioning, private selling, or seasonal hiring out of enslaved property according to these notes?
- **Query 6 (Actors, Perspectives, & Omissions):** Who do the notes identify as the primary authors/beneficiaries of these records, and what specific marginalized perspectives are systematically omitted or erased from the source texts?
- **Query 7 (Representational Conventions & Datafication Implications):** What do these notes state regarding how human beings were linguistically commodified or encoded in historical prose, and what are the specified implications of transforming these records into machine-readable columns?
- **Query 8 (Spatial/Temporal Variation):** What documented historical evidence is provided showing how enslaved transaction practices varied across different regions or decades in Maryland?
